

New Improved AFA L10 Head Gasket Sealing Ring

**A SMALL DESIGN CHANGE MAKES
A BIG DIFFERENCE IN THIS GASKET'S
SEALING PERFORMANCE**

The original Cummins design had shorter, less stable sealing overlap on the Multi-Layer gasket body. AFA has extended this sealing surface to maximize stability, improve sealing and ensure improved durability as well as performance.

- * OE form, fit and function
- Encapsulated sealing openings at critical points
- * Multi-layer expanded graphite over perforated steel core
- * Special coating seals head imperfections
- * **Extended Ring-Lock sealing surface improves durability and performance**

AFA - Technical Innovation that Means Business
